

# Oil 2021 – Analysis and forecast to 2026

Spanish Energy Club, 8 April 2021 Toril Bosoni

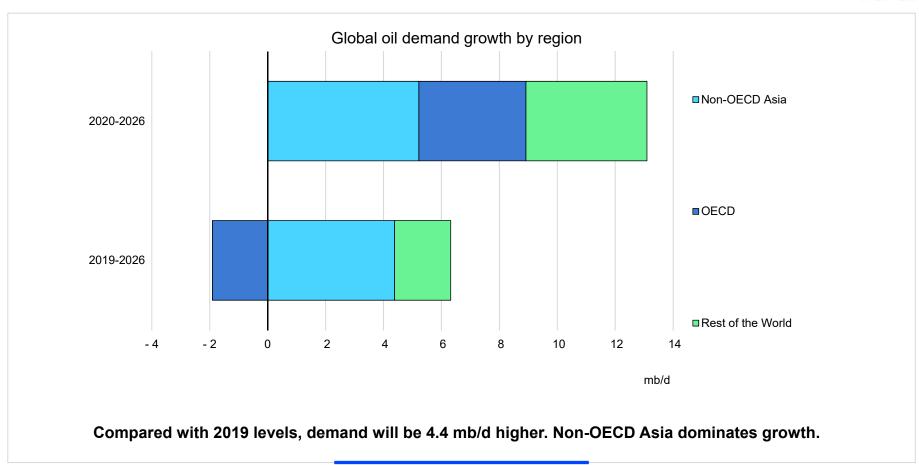

#### Global oil demand shifts lower after historic collapse

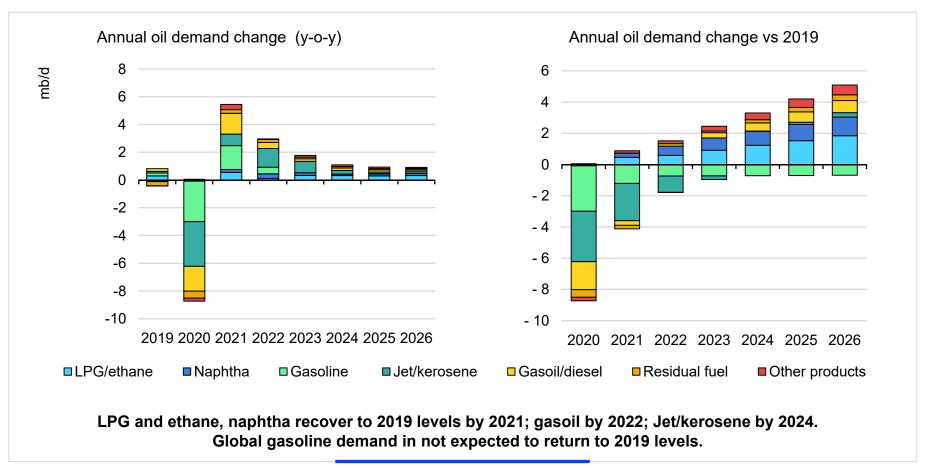

#### Oil demand now on track to grow by 13 mb/d by 2026 from 2020 low

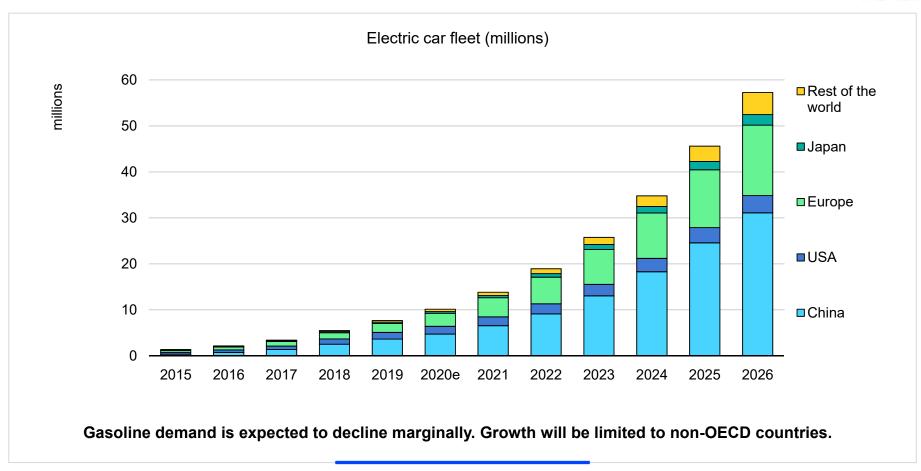

#### Petrochemical feedstocks drive demand growth, gasoline to fall

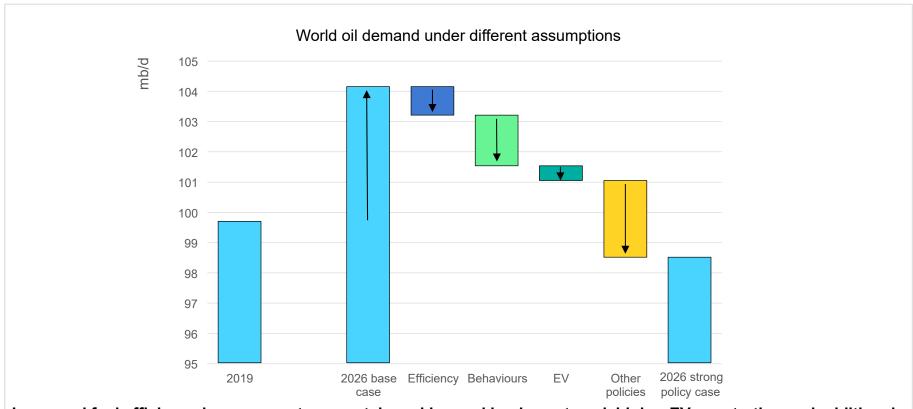

#### Gasoline demand reduced by EVs and efficiency progress

#### Stronger policy action needed for oil demand to decline

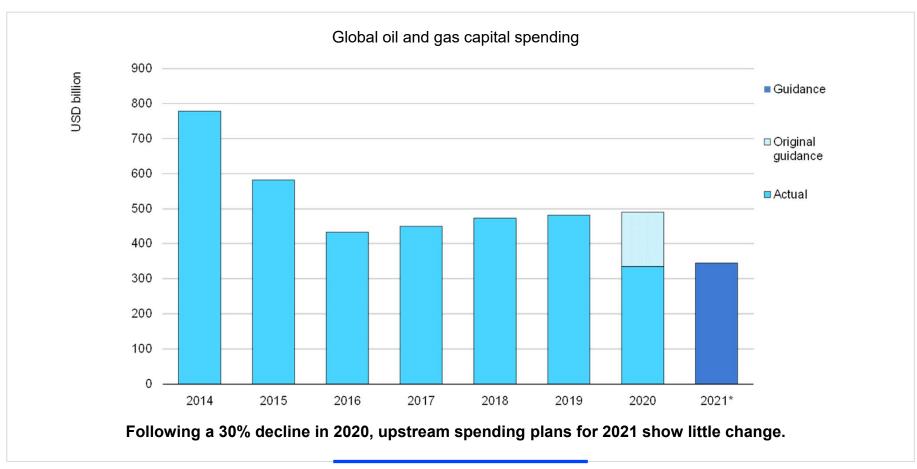

Increased fuel efficiency improvements, more teleworking and business travel, higher EV penetration and additional policies to curb oil use could reduce 2026 oil demand by 5.6 mb/d.

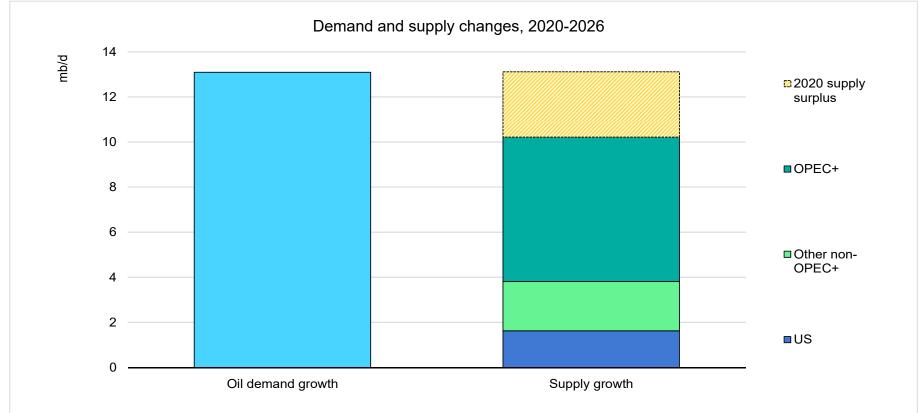

## Industry cuts spending on uncertain outlook

#### Oil capacity building slows, hefty spare cushion helps cover demand | | © |

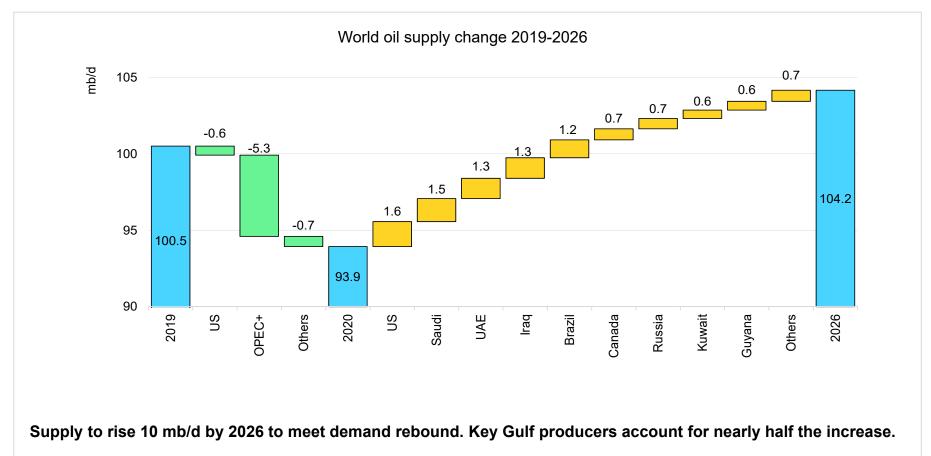

Production capacity rises 5 mb/d by 2026. Ample spare capacity, mostly in Middle East, keeps market comfortable.

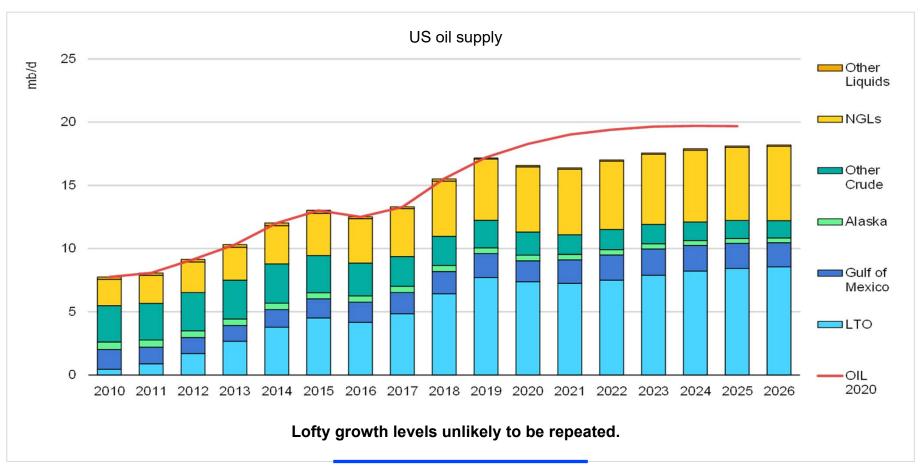

#### Middle East dominates global oil supply increase

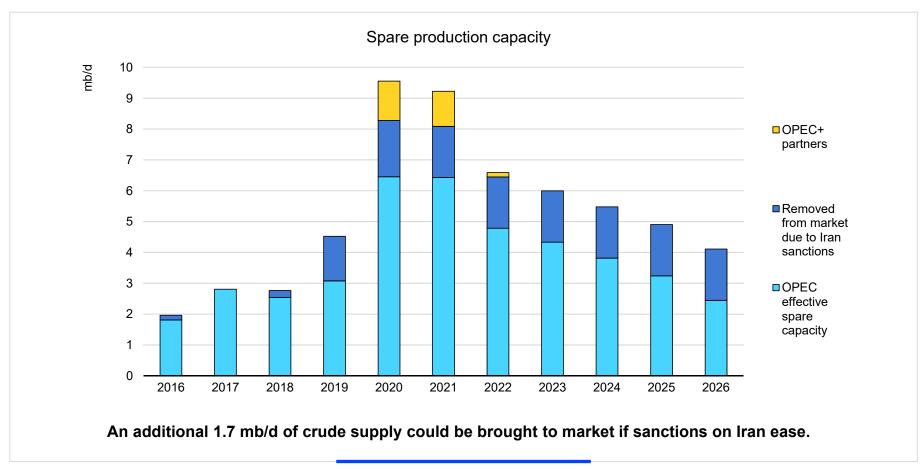

#### Modest US growth expected as investment strategy shifts

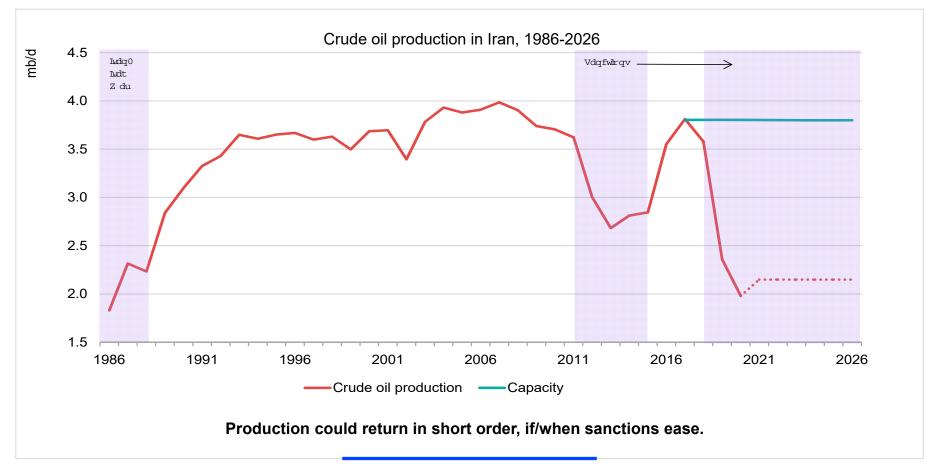

#### **OPEC spare capacity looks comfortable through medium-term**

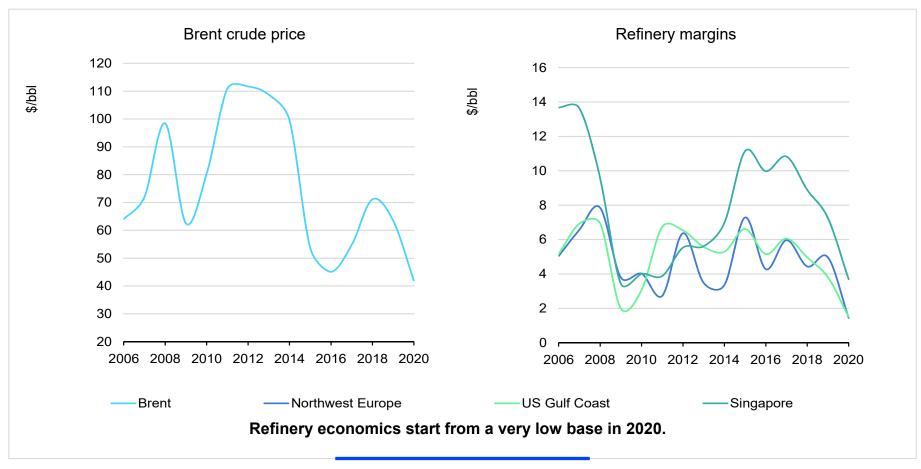

## Iran awaits market return; sanctions shut in 1.7 mb/d of crude supply | CO

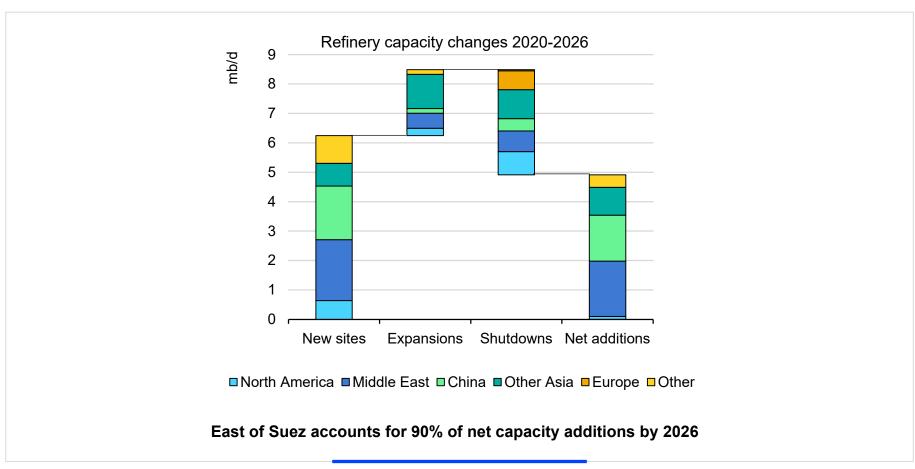

#### Margins plunged to multi-decade lows in 2020

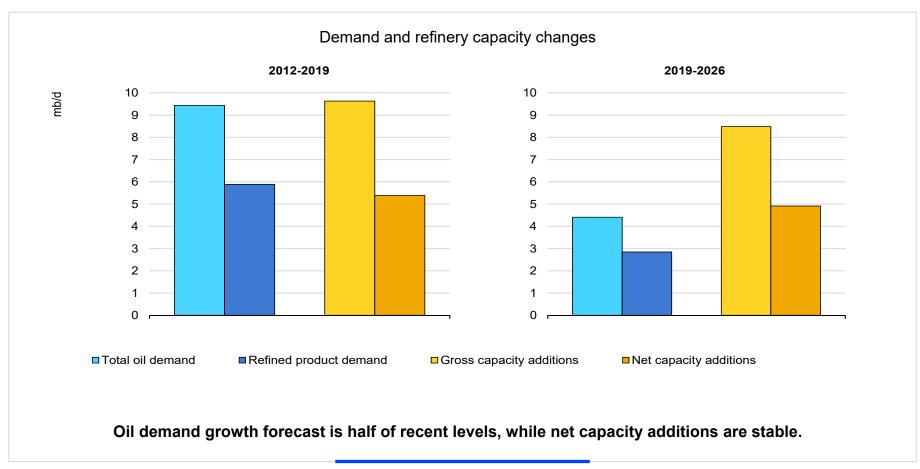

#### **Great downstream migration continues**

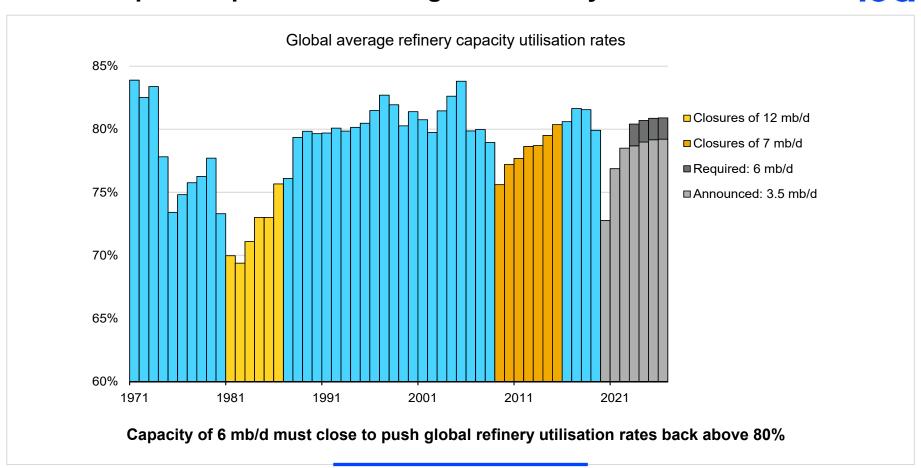

#### Sharp decline in oil demand growth and call on refineries

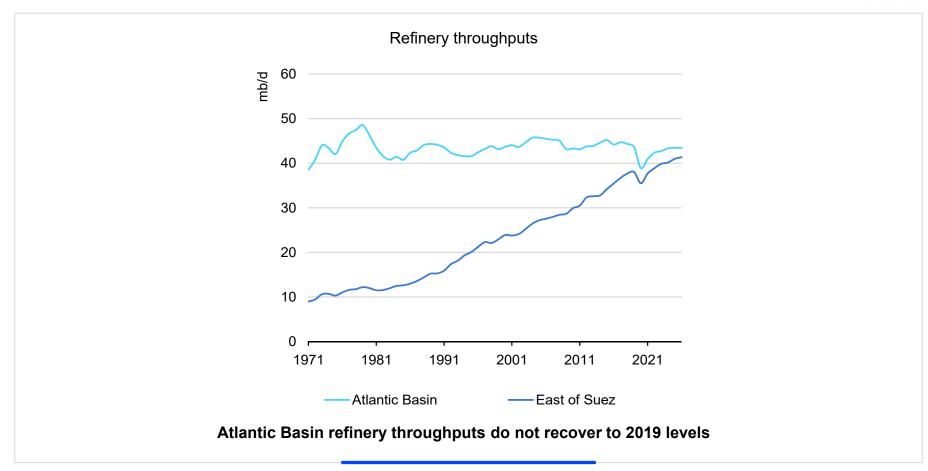

#### Covid-19 speeds up third round of global refinery closures

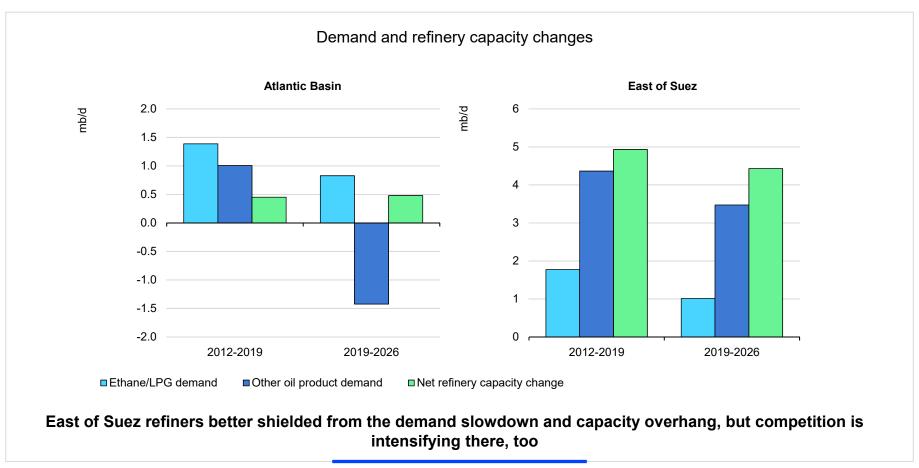

## East of Suez drives increase in global refining throughput

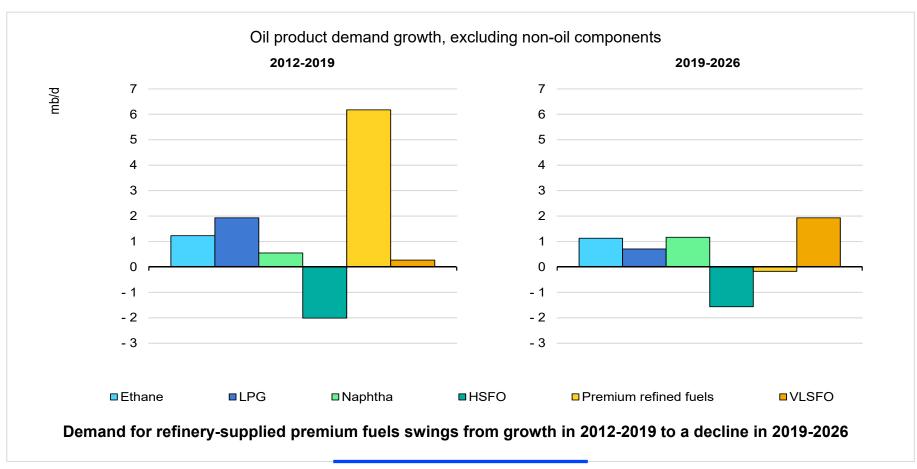

#### The two hemispheres continue diverging

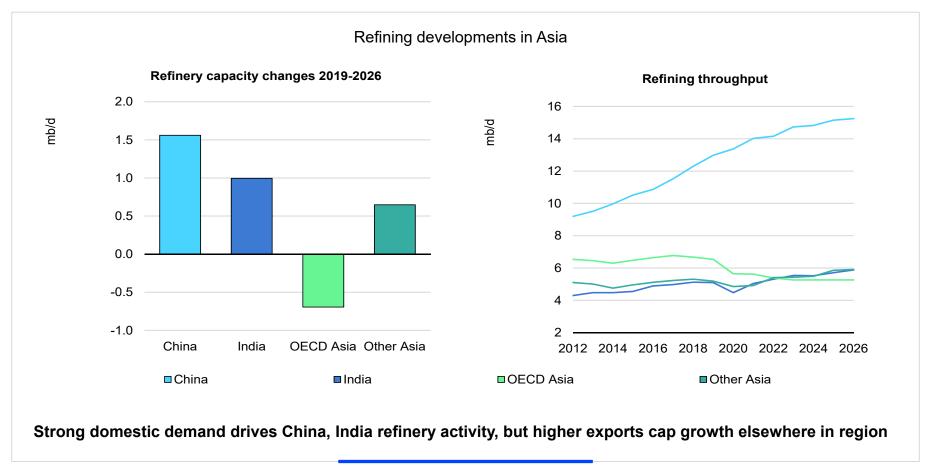

## Refinery economics endangered

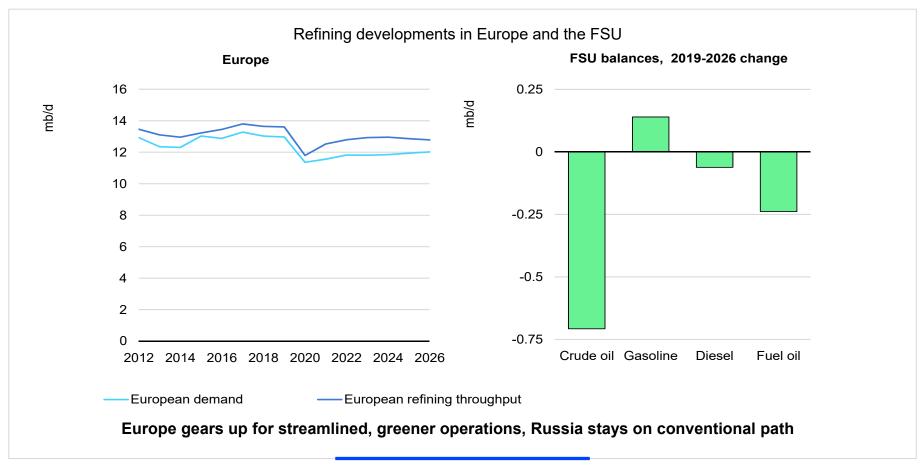

#### China continues to lead refining activity growth globally

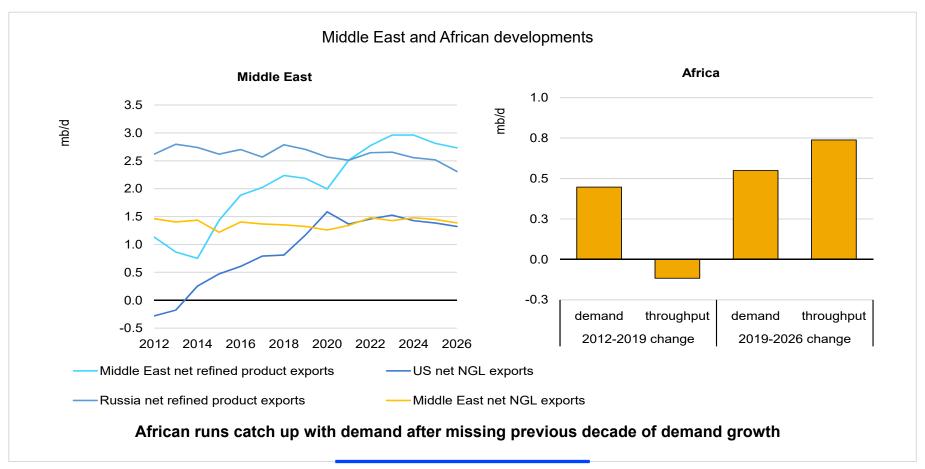

#### Slowdown in European demand hits European, FSU refiners

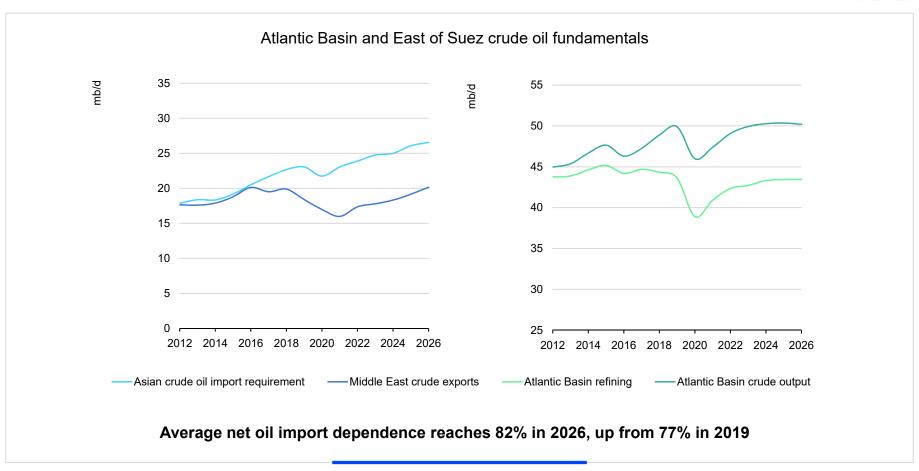

#### Middle East becomes the largest refined product exporter

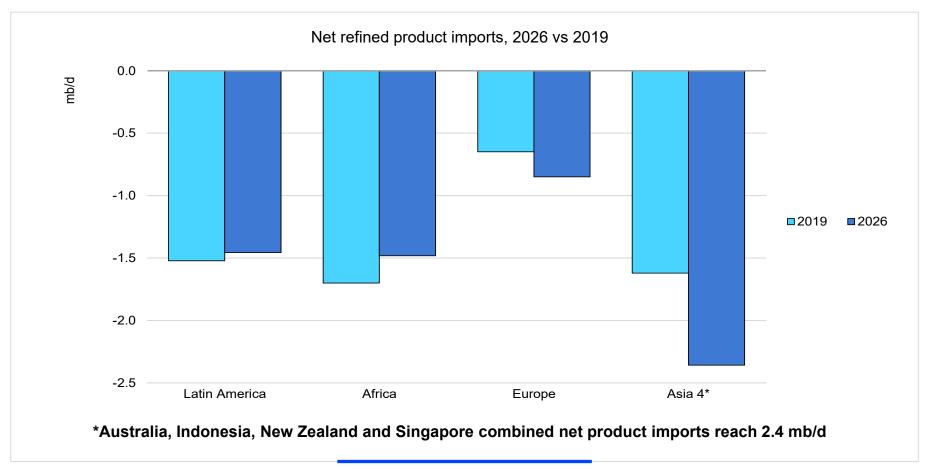

#### Asian crude oil imports reach 27 mb/d

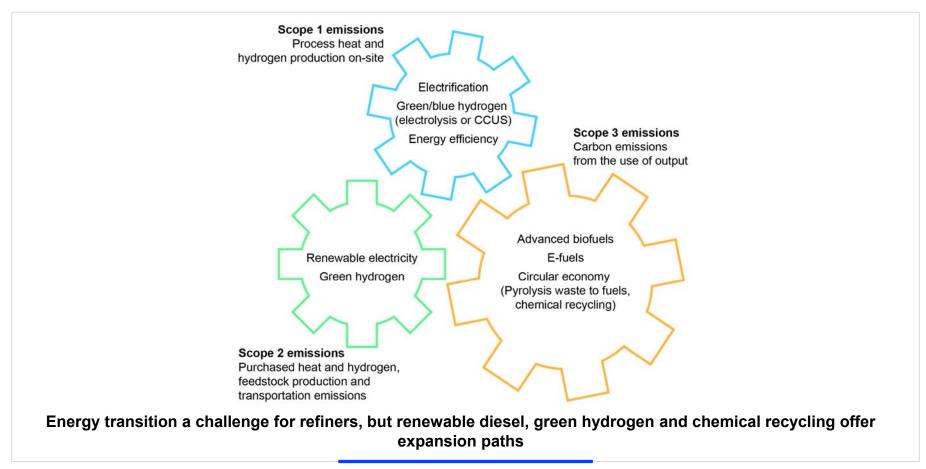

#### The centre of gravity for products trade shifts to Asia

#### Reinventing refining business to fit energy transition
